MODEL: KKL-810-AC-D
AVIATION
NAVIGATION
BACKUP SYSTEM

The K&K Aviation Backup System is designed for AC powered systems. It works as the primary system and an LED backup system. The CrossTalk Controller utilizes password protected, cloud-based software that allows you to control beacons from the comfort of your desk or on the go. The CrossTalk, located inside the control box, activates the backup beacon and sends a notification via email and/or text to the designated technician if the primary beacon fails. By retrofitting your existing system with K&K LED technology, you can rest assured that your aviation navigational system is always working.

Control and Monitor from Anywhere
